

FinTech Start-up

Client is an USA based FinTech startup, which is building all in one API for e KYC for all financial lending needs. Client wanted to augment few dedicated developers. Our team worked with client's development team from USA. GOPHERS used Agile scrum development process. Few of the practices we have done in this engagement include daily stand ups, time zone overlap, continuous integration, peer code reviews, scrums or scrum etc.

Key Features:

- Real time id verification
- APIs interacts with multiple data sources
- Complex dashboards
- Single customer view

Technology Used:

- Golang
- REST
- Docker
- MySQL
