

e- Auction Platform

Client is a funded start-up which has developed an e-auction platform using Python. They wanted to explore Golang and asked us to build multiple APIs on Golang. Our Golang team worked with client's team in distributed Agile development model. We have assigned dedicated Golang developers for the client and have helped them in building complex APIs.

Key Features:

- Buyer / Seller portal
- Advanced dashboards
- Product listing
- Real time valuation of product
- Bulk emails and SMS system
- Real time auction tracking
- Bidder's agreements
- Payments and invoices

Technology Used:

- Python
- Django
- Golang
- MySQL
- AWS
- Vue.js
